galactosiduronic linkages in pectate and other galacturonans:- SUBCELLULAR LOCATION: Secreted:- SUBCELLULAR LOCATION: Secreted:- BIOTECHNOLOGY: The effect of FG can be neutralized by introducing an antisense PG gene by genetic manipulation. The Flavr Savr tomato produced by Calgene (Monsanto) in such a manner has a longer shelf life due to delayed ripening:- SIMILARITY: Belongs to family 28 of glycosyl hydrolases	DENCE FROM N.A.  Leby R.E., Pearson J., Brady C.J., Hiatt W.R.;  lechy R.E., Pearson J., Brady C.J., Hiatt W.R.;  lechiar characterization of tomato fruit polygal  lechiar denaracterization of tomato fruit polygal  TISIONS.  IT W.R.;  FUNCTION: Acts in concert with the pectinesters  process. Is involved in cell wall metabolism, s  polyuronide degradation.  PONTIVET ACTITUTY. Bandom bydrolysis of 1.4-al	SEQUENCE FROM N.A. Plant Physiol. 103:669-670(1993).
-!- FUNCTION: Acts in concert with the pectinesterase, in the ripe process. Is involved in cell wall metabolism, specifically in polyuronide degradation.
-!- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-galactosiduronic linkages in pectate and other galacturonans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQUENCE

Plant Physiol. 103:289-290(1993).
-!- FUNCTION: Acts in concert with the pectinesterase,
process. Is involved in cell wall metabolism, speci
polyuronide degradation.
-!- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A.

:- SUBCELLULAR LOCATION: Secreted.
-!- DEVELOPMENTAL STAGE: In ripening fruit.
-!- SIMILARITY: Belongs to family 28 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Dopico B., Lowe A.L., Wilson I.D., Merodio C., Grierson D.; "Cloning and characterization of avocado fruit mRNAs and their expression during ripening and low-temperature storage."; Plant Mol.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                          Atkinson R.G.;

"A cDNA clone for endopolygalacturonase from apple.";

"A cDNA clone for endopolygalacturonase from apple.";

Plant Physiol. 105:1437-1438(1994).

-!- FUNCTION: Acts in concert with the pectinesterase,

process. Is involved in cell wall metabolism, speci-
polyuronide degradation.

-!- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-FEB-1996

-i- FUNCTION: Acts in concert with the pectinesterase, in the process. Is involved in cell wall metabolism, specifically polyuronide degradation.

-i- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-galactosiduronic linkages in pectate and other galacturonic SUBCELLULAR LOCATION: Secreted.

-i- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. DEVELOPMENTAL STAGE: Appears 12 days before anthesis and levels are seen in pollen on the day of anthesis.

SIMILARITY: Belongs to family 28 of glycosyl hydrolases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polygalacturonase.

CATALYTIC ACTIVITY: {(1,4)-alpha-D-galacturonide}(N)

((1,4)-alpha-D-galacturonide}(N-1) + D-galacturonate.

SUBCELLULAR LOCATION: Secreted.

TISSUE SPECIFICITY: Pollen.

DEVELOPMENTAL STAGE: Late stages of pollen developmen

SIMILARITY: Belongs to family 28 of glycosyl hydrolas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: May function in depolymerizing pectin development, germination, and tube growth. Submitted (MAR-1995) to the EMBL/GenBank/DDBJ databases.
Submitted (MAR-1995) to the depolymerization of the FUNCTION: May function in the depolymerization of the its walls during pollen tube elongation, or in that o during pollination (By similarity).
-!- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-galactosiduronic linkages in pectate and other galact-!- TISSUE SPECIFICITY: Pollen specific.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hydrolase;
